EXP-4 Configuring a LAN with switch & Ethernet

- Aim:
  Setup and configure LAN using a switch and Ethernet cables in your ~~lab~~ lab.

- Lan Description:
  A Local Area network refers to a network that connects devices within a limited area such as an office, school. It enables the users to share resources including data, printers and internet access. LAN connects and promotes collaboration. ~~and~~ across the information transfer between users.

- Procedure to setup LAN:

① ~~Plan~~ Plan and Design an appropriate network topology taking into account network requirements.

② ~~Stt~~
You can take 4 computer to network, a switch. 8, 16, 24 ports which is sufficient for network.

③ Connect your computers to networks switch via an ethernet cable which is as simple as simple as plugging into network switch

④ Assign IP address to your PCs
① Log on to the client computer as admin
② Click Network and Internet connections
③ Right click Local Area Connection / Ethernet go to properties → TCP/IPV4 → Click on properties → select use the following IP address option

⑤ Configure the network switch
① Connect your computer to the switch: To access the switch's web interface you will need to connect your computer
② Log in to the web interface Open a web browser & enter the IP address of the switch.
③ Configure basic settings Once you're logged in
④ Assign IP address as 10.1.1.5 &
255.0.0.0

⑥ Check the connectivity b/w switch & other machine.

⑦ Select a folder. → go to properties → click sharing tab → share with everyone in LAN

⑧ Try to access the shared folder. from others

9/10/19 10/10

- Observation./Output:

① FIREWALL ICMP Blocking
② IP Address conflicts
③ Subnet mask mismatches
④ Physical layer. troubleshooting
