EXP-5 Experiments on Packet capture tool

- Aim:

To understand the features of wireshark as a packet capture tool and understand encapsulation of information at various layers of a Protocol stack

- Description:

Packet sniffer:

- sniffs messages being sent/received by your computer.
- store and display contents of various protocols.
- Passive program

WIRESHARK:

It is a network analysis tool formerly known as ethereal captures packets in real time and display them in human readable format

- Procedure:

① Select LAN in wireshark.

② Create a filter to display only TCP/UDP packets, inspect the packets and provide the flow graph

② Create a filter to display only ARP packets and inspect the packets

③ Create a filter to display only DNS packets and provide the flow graph

④ Create a filter to displays only HTTP packets and inspect the packets pro

⑤ Create a filter to display only IP/ICMP packets and inspect the packets

⑥ Create a filter to display only DHCP packets and inspect the packets

- Observations & Result:

Thus, the packet capture tool. Wireshark was studied and successfully utilized to capture.
